

## **Geriatric Day Hospital**

**1 Morley Avenue, Winnipeg, MB R3L 2P4. Robert A. Steen Day Hospital, located at Riverview Health Centre**

Age group: Older adults (65+)

Diagnosis: There are no diagnosis restrictions or indications, though there should be some identifiable goals that can be achieved through short-term rehabilitation. Team screening and/or assessment will help determine if Day Hospital can help.

Geographic location: Those living in the designated catchment area, identified as Fort Garry or River Heights, will access the Riverview Day Hospital. Those living in other catchments areas will generally need to attend one of the other Day Hospital locations within Winnipeg (St. Boniface, Seven Oaks, Deer Lodge, or Health Services on Elgin).

Primary Care Provider: clients maintain their current PCP relationship and information updates are shared at initial assessment, discharge and in-between as indicated.

A referral is required, typically from one of the following: primary care provider, hospital, GPAT, GMHT, Home Care, or other health care provider or program.

The wait list varies depending on the referral volume. The better the information included in the referral, the shorter the referral screening & appointment booking turn around will be. Most clients are able to be assessed within a few weeks of being contacted.

There is no fee charged to clients, unless they opt to utilize the available accessible transportation service. In this case there would be a \$15 charge for a round-trip.
